1DETAILED ACTION

Request for Continued Examination

The request filed on 12/2/2002 for a Request Continued for Continued Examination (RCE) under 37 CFR 1.114 based on parent Application No. 09/463,598 is acceptable and a RCE has been established. An action on the RCE follows.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

The rejection of claims 1-14 under 35 U.S.C. 103(a) as being unpatentable over Miller et al. (5,242,621) is maintained for the following reasons.

Miller discloses a corrosion inhibitors containing alkanoic, hydrocarbyl dicarboxylic and carbocyclic-substituted, alkanoic acids or salts give high performance, heat transfer fluids and antifreezes, with improved properties including storage stability. (abstract) The reference teaches that the cyclohexane acid includes cyclohexyl carboxylic (formic) acid, cyclohexyl acetic acid and cyclohexyl propionic acid. And if desired, can be included in the antifreeze or heat transfer compositions (col. 1, lines 40-42). These materials include, among others, one or mixtures of the following: additional corrosion inhibitors including other carboxylic acids or salts, borates like sodium tetraborate and sodium borate, i.e. borax, silicates like sodium silicate and sodium metasilicate pentahydrate, benzoates like sodium benzoate, nitrates like sodium nitrate,

, Art Unit: 1751

nitrites like sodium nitrite, phosphates, carbonates like sodium carbonate, molybdates, hydrocarbyl thiazoles, hydrocarbyltriazoles, such as tolyltriazole or benzotriazole, and the like; stabilizers such as organosilanes and the like; pH adjusters, such as sodium hydroxide and the like; hard water stabilizers; antifoam agents; or other materials useful in antifreeze or heat transfer fluids. (col. 3, line 63 – col. 4, line 9)

Although no examples of a coolant containing all of the instantly claimed components are disclosed, the reference does generally teach that all the components may be used.

The applicant admits that the reference does not require glycol be used and that the reference states that "other freezing point depressants" may be used. However, the applicant argues that only glycols would be obvious to the skilled artisan and at the same time argues that one skilled in the art would not interpret the reference to mean anything other than glycols in spite of its teaching of "other freezing point depressants".

The examiner disagrees and takes the position that a skilled artisan would interpret "other freezing point depressants" to mean freezing point depressants other than glycol.

Therefore it would have been obvious to create the instantly claimed heating or cooling in view of Miller, as the references teaches the use of a corrosion inhibitor which may contain a hydrocarbyl dicarboxylic, carbocyclic-substituted, alkanoic acids, other carboxylic acids or salts, triazoles or other materials useful in antifreeze or heat transfer fluids.

Art Unit: 1751

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller et al. (5,242,621) as applied to claims 1-14 above, and further in view of Back et al (4689165) or Kardos et al (4,689,165).

Although the primary reference teaches that "other freezing point depressants" may be used, it does not teach specific examples. The secondary reference, Back, discloses a freezing point depressant free of glycol (col. 4, line 33-37). Kardos discloses a glycol free anti-freeze liquid (col. 4, line 35-49).

Therefore it would have been obvious to create the instantly claimed heating or cooling in view of Miller and further in view of Back or Kardos, as the teaches the use of a corrosion inhibitor which may contain a hydrocarbyl dicarboxylic, carbocyclic-substituted, alkanoic acids, other carboxylic acids or salts, triazoles or other materials useful in glycol free antifreeze or freezing point depressant.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derrick G. Hamlin whose telephone number is (703) 305-0590. The examiner can normally be reached on Monday-Thursday and alternating Fridays from 7:30 AM - 4:00 PM.

If reasonable attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Yogendra Gupta, can be reached on (703) 308-4708. The fax phone number for this Group is (703) 305-3600.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0661.
